EDUCATION

BUDI LUHUR UNIVERSITY **2007 - 2011**
System Information Faculty Technology

PERSONAL PROFILE

Senior Cloud & Infrastructure Specialist with deep expertise in Microsoft Azure, hybrid architecture, and Linux server management. Passionate about automation and DevOps, I drive scalable, secure, and resilient infrastructure solutions across cloud-native and on-prem environments.

Proven expertise in Azure Cloud, Security, infrastructure automation, and DevOps.

Passionate about driving innovation through Zero-Trust security, CI/CD pipelines, and proactive threat detection using SIEM. Adept at leading cloud transformations and enterprise migrations while ensuring compliance with industry standards.

KEY STRENGTHS AND ATTRIBUTE

- People-First Technologist** : Skilled at balancing technical excellence with stakeholder collaboration, ensuring cloud solutions not only work but are embraced by users and teams.
- Adaptable & Solution-Oriented** : Capable of analyzing complex systems and implementing scalable solutions that align with business and security objectives.
- Empathetic Leader with Growth Mindset** : Approaches team dynamics with humility, curiosity, and a genuine desire to elevate others while constantly learning and improving.
- Security-Oriented Thinking** : Strong focus on Zero-Trust architecture, compliance (ISO 27001, NIST), and threat mitigation through SIEM, EDR/XDR, and policy enforcement.
- Strong Communicator Across Levels** : Able to translate technical concepts for non-technical audiences, from IT executives to cross-functional department leads.

CORE EXPERTISE & TECHNICAL SKILLS

- Cloud Infrastructure & Security** : Azure Entra ID, Defender for Cloud, Azure Sentinel, Microsoft Defender, Zero-Trust Architecture, Azure Policy, NSG, Azure Firewall
- Linux Server Administration** : Ubuntu, CentOS, RHEL, Debian; Systemd, LVM, Crontab, RAID, SSH Hardening
- Shell Scripting & Automation** : Bash, PowerShell, Python (automation, backup, cron jobs), script deployment and monitoring
- Web & App Services** : Nginx, Apache, PHP-FPM, MySQL/MariaDB, DNS/BIND, Let's Encrypt, Zimbra, iRedMail, Sendmail, Postfix
- Configuration Management & Infrastructure as Code (IaC)**: Puppet, Terraform, Ansible (Hybrid deployments, Azure & On-Prem)
- CI/CD Automation** : Jenkins, GitHub Actions, Azure DevOps; design and management of build/test/deploy pipelines
- Container Orchestration** : Kubernetes (AKS), Docker, Portainer; cluster provisioning & management
- Monitoring & Security Operations** : Elastic ELK Stack, Grafana, Prometheus, SolarWinds, Nessus, Wazuh, OpenCTI, Microsoft Sentinel, Wireshark
- Backup & Disaster Recovery** : Azure Site Recovery, Veeam, Acronis, Synology NAS; backup policy automation and DR runbooks
- Identity & Access Management** : Azure AD, Conditional Access, MFA, PIM, Group Policy, DMZ Access Controls
- Networking & Virtualization** : Cisco (IOS, ACL, OSPF, BGP), MikroTik (PCC, NAT, Firewall, VPN), VMware vSphere, Hyper-V, Sangfor NGAF, pfSense, Proxmox

PROFESSIONAL EXPERIENCE

Information Technology Infrastructure Specialist

JULY 2023 - PRESENT | JAKARTA - INDONESIA

Digiserve by Telkom Indonesia

- **Designed and Secured Hybrid Cloud Infrastructure** : Successfully architected a secure and scalable hybrid environment integrating Azure Virtual Machines, Azure Blob Storage, and Azure Entra ID (AD Sync) with on-premise Active Directory, aligning with Zero-Trust principles.
- **Streamlined CI/CD Pipelines** : Automated software delivery workflows using Jenkins, Azure DevOps, and GitHub Actions, reducing deployment errors and accelerating release cycles by 60%.
- **Enhanced Infrastructure Visibility & Threat Detection** : Built a unified monitoring and SIEM platform using Elastic ELK Stack, Wazuh, Microsoft Sentinel, and OpenCTI enabling real-time alerting and proactive incident response.
- **Strengthened Backup & DR Resilience** : Integrated multi-tier backup solutions using Veeam, Acronis, Azure Site Recovery, and Synology NAS, ensuring reliable recovery and RPO/RTO compliance for 100+ VMs and workloads.
- **Optimized Kubernetes & Docker Environments** : Managed containerized infrastructure using Portainer and AKS (Azure Kubernetes Service), enabling rapid microservices deployment and infrastructure scaling.
- **Improved Configuration & Policy Enforcement** : Automated policy and system configuration management with PowerShell DSC, Terraform, and Ansible, reducing manual overhead and increasing compliance posture.
- **Secured Identity & Access** : Implemented Conditional Access, PIM (Privileged Identity Management), and MFA across Microsoft 365 and Azure resources to enforce Zero-Trust-based access control.
- **Network Optimization & Firewall Management** : Administered secure edge environments using Cisco, MikroTik, Sangfor NGAF, and pfSense, enhancing VPN connectivity, traffic shaping, and access control efficiency.

Key Achievements :

- Led multi-cloud infrastructure projects with 99.99% uptime and optimized cost
- Architected hybrid cloud infrastructure integrating Azure Entra ID sync with Cloud Sync on-prem AD, .
- Automated CI/CD pipeline infrastructure provisioning with Github and Ansible, reducing deployment times by 70%.
- Developed integrated SOC monitoring dashboards combining Microsoft Sentinel with Elastic ELK and Wazuh.
- Built Zero-Trust security frameworks in cloud environments to safeguard enterprise assets.

Senior System Administrator

JUNE 2017 - FEB 2023 | JAKARTA - INDONESIA

PT Megaxus Infotech

- **Designed and maintained** over 200+ online game servers across Tier-2 data centers, ensuring 99.99% uptime and efficient resource utilization for high-demand platforms.
- **Led virtualization migration** from physical to virtual infrastructure using VMware ESXi, vCenter, and vMotion—resulting in a 40% reduction in hardware dependency and improved disaster recovery.
- **Hardened and secured Linux and Windows servers** by implementing patching strategies, firewall policies, and access control, reducing security incidents by 60%.
- **Developed scalable email infrastructure** (Zimbra, iRedmail) with integrated DKIM, SPF, and AV/AS protection, boosting email security and domain trust scores.
- **Implemented network intrusion detection** using Suricata-based IDS/IPS for production environments, enhancing threat visibility and proactive alerting.
- **Automated routine server operations** (backups, patching, monitoring) using custom Bash scripts—cutting manual workload and human error.
- **Managed hybrid DNS infrastructure** with BIND and multiple registrars (goodady.com, pandi.or.id), supporting global gaming services with low-latency name resolution.

- **Built and configured Web Server** stacks (Nginx, Apache, MySQL, PHP-FPM) for internal tools, game portals, and patch servers across CentOS and RHEL.
- **Designed and Implement cloud architecture** for AWS EC2 & VPC supporting mobile game deployment, integrating scalability and fault tolerance.
- **Provided end-user support**, documentation, and IT onboarding, ensuring seamless handover and compliance with internal IT policies.

Network System Engineer

JULY 2013 - JUNE 2017 | JAKARTA - INDONESIA

PT Megaxus Infotech

- **Configured and maintained** 50+ Cisco routers and MikroTik firewalls across multi-branch networks, improving connectivity and reducing downtime by 35%.
- **Established BGP peering with multiple ISPs** (Telkom, XL, IIX, OIXP, LintasArta) to ensure high-availability and optimized routing for game infrastructure and live events.
- **Engineered fault-tolerant MikroTik** configurations with advanced PCC, NAT, Mangle, and failover load balancing, ensuring uninterrupted connectivity across ISP lines.
- **Reduced network downtime by 45%** by automating monitoring with tools like Scrutinizer, PRTG, and custom Bash scripts for early alerting and response.
- **Configured complex ACL rules on Cisco and Nexus** routers (RB750, 1100X2, 4505, 7606, 7202) to enforce layered security policies across segmented subnets.
- **Led cross-border VPN implementation** between Indonesia, Korea, and China for secure, low-latency access to game publishing environments.
- **Optimized Network** OSPF and VLAN configurations for internal services and hybrid cloud transitions, boosting network performance and segmentation.
- **Standardized documentation** of all networking assets and scripts into a shared repository, improving team collaboration and reducing onboarding time by 30%.
- **Diagnosed and resolved game server** latency issues, reducing average packet loss by 70% through proactive routing analysis and BGP path optimization.

System Administrator Linux & Windows

DEC 2011 - JUNE 2013 | JAKARTA - INDONESIA

PT Linktone & Okezone (MNC Group)

- **Engineered High-Traffic Streaming Systems** : Successfully built and maintained media streaming infrastructure (FFMPEG, Wowza, Darwin Streaming Server) to support live and on-demand video platforms.
- **Optimized backend streaming performance** : by implementing advanced Mikrotik configurations (NAT, VPN, bandwidth shaping), ensuring seamless video delivery.
- **Deployed Private Cloud Infrastructure** : Implemented scalable virtualization solutions using VMware ESXi and Proxmox, enhancing system availability, performance, and cost-efficiency.
- **Strengthened Network Performance & Security** : Optimized Mikrotik-based routing, NAT, and firewall policies for secure bandwidth shaping and VPN integration.
- **Standardized IT Operations & Policies** : Defined and enforced IT policies for user access, submission handling, and software usage, ensuring regulatory compliance and operational clarity.
- **Automated Configuration & Backup Management** : Used Bash, Puppet, and Zimbra for automated backup routines, mail services, and system maintenance across multiple environments.
- **Improved Development Workflow** : Introduced version control via Subversion (SVN) and staging environments, streamlining collaboration between IT and development teams.
- **Led Cross-Functional Technical Support**: Provided hands-on technical support, documentation, and training for internal teams, ensuring smooth adoption of new systems and policies.
- **Designed staging and version control** : environment using Subversion (SVN), enabling seamless testing and CI processes for development teams.
